MINUTES OF THE PLAINFIELD PLANNING BOARD
JANUARY 2ND 2006
MERIDEN TOWN HALL

Members Present: Jane Stephenson Greg Estey Greg Davini
Mike Sutherland Ruth Cassedy

The meeting opened at 7:00pm

The December 19th minutes were approved as amended.

Steve Halleran updated the board on the January 16th hearing on the petitioned warrant article. Due to interest in the topic, the meeting has been moved to the Plainfield Town Hall on Route 12A.

**Master Plan Update Survey:** The remainder of the meeting was spent working on the in progress survey draft. Conservation Comission Chairman David Grobe participated in this workshop session. Now that the format of the survey has been determined, developing the actual questions for the survey has become the focus. The survey is broken into three sections, Natural resources, Community Development and Business Development. Mike will work on a final draft of the survey for the next meeting.

The meeting adjourned at 8:45pm.

Jane Stephenson, Chair
Plainfield Planning Board

Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD
JANUARY 16th 2006
MERIDEN TOWN HALL

Members Present:  Jane Stephenson  Greg Estey  Greg Davini
    Mike Sutherland  Ruth Cassedy  Ron Liston

The meeting opened at 7:00pm

The January 2nd minutes were approved as amended.

Mike Sutherland noted that he will be forwarding to all an updated version of the master plan survey for the membership to review. The board hopes to finalize the work on February 6th.

Petitioned warrant article hearing: Jane Stephenson opened the hearing by reading the posted notice. If approved, this change will remove the “Approved Business Project” option from the list of the possible special exceptions for the Village Residential Zone. Stephenson noted that the hearing is being held to comply with RSA 675 which requires that the Planning Board place on the ballot a recommendation to the community as to whether or not the board approves of the proposed change. Jane read three letters from the petition file. The first from the Selectboard opposing the change, the second from Diane MacDonald supporting the change and the third from Ruth Wheeler opposing the change.

About forty residents of the community attended the hearing.

Petitioners Judy Atwater and Diane MacDonald explained that their concern is that as currently written the ordinance provides too much exposure to the Village zones for industrial style development. Both feel that there are plenty of other locations in town better suited for this type of development.

Boone Rondeau asked that the approved business project concept be explained. Jane Stephenson noted that this special exception is typically used for large businesses where the owner will not be living on the site. These types of businesses must be located on property with state maintained highway access.

Gordon Wilder read a statement opposing the change and urging new residents to town not to be so quick to try to change what was here before they arrived. He urged the Planning Board not to support the change.

Gene Hewes noted that he feels the town needs more business to bring tax dollars into the community. George Koehler also spoke in opposition to the change. Resident Dan Lapan noted that he feels this is one group trying to pick and choose who can run a business in the town. Eric Brann noted that he senses that most in the room oppose the change because this is one step toward excluding other activities and business from other parts of town later on.
Business owner Rich Fontaine, having just come through the land use permitted process feels that it is already restrictive enough and no new regulations or prohibitions are needed. He urged the Planning Board not to support the change.

Business owner Robert Marrazzo noted that all residents benefit from businesses in the town and that more restrictions are not needed. He urged the Planning Board not to support the change.

Nate Cass agreed and noted that the town’s tax base needs to be broadened and that businesses pay their share of taxes in this community.

Judy Atwater responded to the above by saying that this is not about anti-business, but rather about trying to located large businesses in more appropriate areas than the villages.

Jane Stephenson noted that the Planning Board is now finalizing a community survey as part of its efforts to update the Master Plan. All are encouraged to complete the survey which will have a business section.

Margaret Drye, who left a Finance Committee meeting at the library to come over, noted that she signed the petition because she supports the idea of limited large business from the Village Zone, however, if there are other ways to achieve the same end she would support that as well.

George Koehler objected to people coming late to the meeting and speaking. He repeated his earlier point that this was a taking of rights and he supports the position of Gordon Wilder.

Margaret Cassedy noted that she felt these types of discussions are very helpful to the town’s land use boards and she appreciates all the views expressed this evening.

There being no others wishing to speak, the Planning Board noted that it will decide on whether or not to support the article at the board’s next meeting which is February 6th at the Meriden Town Hall.

The hearing ended at 9:00pm, the meeting was adjourned at 9:15pm.

Submitted,

Stephen Halleran

Jane Stephenson, Chair
Plainfield Planning Board
The meeting opened at 7:00pm

Petition Warrant Article: As a final step in the board’s process to develop the required Planning Board position on the question the board discussed the petitioned article. See January 16th minutes from the public hearing for background. If approved by voters, the change will remove the “Approved Business Project” option from the list of the possible special exceptions for the Village Residential Zone. While understanding and appreciating the goal of the petitioners, board members felt that as proposed the change is overly restrictive and may be more than is necessary to achieve the petitioners goal of insuring that the town’s Village areas remain rural in character. The board felt that the upcoming master plan survey might provide additional input from the community on this important subject. Several questions have been designed with this very issue in mind. This being the case, Mike Sutherland moved that the Board vote to “not recommend the petitioned warrant article for passage”. The motion was seconded by Ruth Cassedy and voted unanimously in the affirmative.

Verizon Wireless Tower: Attorney Robert Pearce shared with the board the proposed landscaping plan for the expanded tower enclosure at 97 Freeman Road. See December 19th 2005 minutes for background. The plan includes two 8’ white pines and two 8’ arborvitae along with two dutchmanspipe vines to screen approximately 50’ of chainlink fence. Based on board discussions centered on the slow growth characteristics of the dutchmanspipe and the loss of lower branches from white pines the proposed plantings were amended to include 8-10 Virginia Creepers (faster growing vine that is more hardy) to replace the dutchmanspipe and two staggered rows of 6-8 arborvitae trees to replace the two white pines and two arborvitae originally proposed. The new arborvitae to be at least 8’ when planted.

Attorney Pearce indicated that a removal bond for the latest improvements to the tower will be posted by Verizon Wireless. This will insure that adequate funds exist to decommission the entire tower and supporting structures once it is no longer in service.

Abutter Cindi Taylor expressed concern that her specific questions regarding radio frequency emissions have not been addressed. She is concerned that their house is both closer to and at a higher elevation to the tower than surrounding residences. She want to insure that this does not pose a health risk to her family. Attorney Pearce will have a Verizon engineer address her concerns in the coming days.

Planning Board members concurred that the project may move to the building permit process with the landscape plan as amended, once the radio frequency question has been answered.

Stephen Pope representing his family’s Dad’s House LLC: A preliminary discussion of a proposed subdivision of the former KUA guest house property. Based on a study done by Kimball Union before selling the property, Mr. Pope is considering as many as 10 lots for the 28 acre property. The front of
the open field along Bean Road would be left undeveloped and the homes would be accessed from an 800' long town road that would come off Bean Road and turn to the north. The homes would likely be visible from Bean Road, but set back away from the road some 200'. The goal of the project is to recoup some of the Pope family’s investment that has been made converting the guest house into a corporate retreat. At the moment, private wells and private septic systems are planned. Board members encouraged Stephen to consider bringing public water and sewer to the site as a means of reducing the environmental impact of the project. Such a move would allow the developer to consider a Conservation Design Project which includes relaxed lot dimensional requirements for good cause such as open space preservation.

Many of the neighbors present questioned as to whether the net return to the developer might be greater by creating fewer lots with a tax deductible conservation easement on the remainder of the property. Stephen Pope agreed to look into this, he again noted that none of the proposal is set and he is not necessarily looking to become involved in a complex subdivision development process that will be both time consuming and capital intensive.

Member of the public questioned whether any of the existing field is designated as Prime Agricultural land. Chairwoman Stephenson indicated that she thinks some of the field may be Prime Agricultural land, the preservation of which is a primary goal of the town’s land use regulations. Halleran noted that new roads require communication with the Board of Selectmen and that the process typically involves significant expense. He encouraged Mr. Pope to talk with Robert Dunning and Lee Marden about their ongoing Plainfield project, Baynes Road.

Mr. Pope thanked the board and the neighbors for their time. He will consider all that he has heard when deciding how to proceed. The town will investigate further the prime agricultural soils issue that has been raised.

**Master Plan Update:** Board members spent the rest of the meeting finalizing the Master Plan Survey that will be mailed out in the coming days. The Planning Board hopes to have returns back in the office by March 1st.

Approval of minutes was deferred until the next meeting.

The meeting was adjourned at 9:30pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,

Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD
FEBRUARY 20TH 2006
MERIDEN TOWN HALL

Members Present: Jane Stephenson Greg Estey
Greg Davini Ruth Cassedy

The meeting opened at 7:00pm

Kimball Union Academy: Mike Schafer, Hugh McGraw met with the board for a preliminary
discussion concerning the development of several athletic fields in the area located between Chellis
pond and Route 120. Pat Buccellato of Pathways Consultants also attended the meeting on KUA’s
behalf. At this time, five or six new athletic fields are planned. The main project involves the
construction of a lighted turf field to be used as a multi-purpose field. This field will be located
toward the existing ski trail loop and will run perpendicular to Chellis pond. The field will be
approximately 120 yards long and 50 yards wide. During the month of March the field would likely
be used daily from early afternoon to 9:00pm. This intense use is just until the other natural playing
fields dry out enough to be used. During events, most of the public parking would be in the lot that
serves the hockey rink.

Pat Buccellato noted that the field development will result in little if any additional water draining
into existing water courses. With the exception of the turf field, all the other fields will drain as they
currently do. Pat Buccellato noted that wetlands have been delineated, none of the new playing
fields will impact wetlands.

Chairwoman Stephenson expressed a desire to see, as part of the application, very detailed lighting
plans, drainage calculations and parking plans. Other board members agreed that this will be
important. Likewise the details on locations of the various fields and other site developments will
have to be known with some certainty. Kimball Union hopes to have a formal application prepared
for either the March or April Planning Board meetings.

Other business: The February 6th minutes were approved as amended. Board members reviewed
the details of two projects on the docket for the March 6th meeting. The first is a one lot subdivision
of the Quimby property the second a three lot subdivision of the Torrey Property.

Verizon Wireless One: Planning Board members reviewed the revised landscaping plan, see
February 6th minutes. In addition, Halleran confirmed that Cindy Taylor’s concerns about radio
frequency emissions have now been satisfactorily addressed by the applicant. Pending receipt of
the needed surety bonds, this project is ready to move forward with a building permit.

Board members reviewed and approved an adjustment to the previously approved Swogger/Roberts
Annexation (November 2004). As amended the project now only includes the transfer of parcel A,
parcel B will remain with the Roberts property. As this is a less intensive project and lot shapes are
not adversely impacted, board members endorsed the change.
Master Plan surveys are now out and being completed. Survey returns are due in by next Friday.

The meeting adjourned at 8:10pm.

Jane Stephenson, Chair
Plainfield Planning Board

Minutes of the Plainfield Planning Board  
March 6th, 2006  
Meriden Town Hall

Members Present: Jane Stephenson Ruth Cassedy Ron Liston  
Greg Estey Mike Sutherland Greg Davini

7:00 pm Opening of Meeting

QUIMBY SUBDIVISION: Jane Stephenson read a report by Engineer Louis Caron giving his recommendations for road improvements related to the Quimby subdivision. His recommendations included clearing vegetation from one area of the road to improve site lines and creating a new ditch along the field in order to create better drainage for runoff. Questions were raised by the applicant and abutters about why Matthew Houde should be responsible for creation of a ditch that will extend beyond his property line. Chairman Stephenson explained again that because of the number of minor subdivisions the Quimbys have done in the past ten years, town regulations state that this latest Quimby subdivision must trigger a more extensive review than the usual minor subdivision. This regulation was put in place to insure that the full cost of improvements related to a proposed development (whether a major or several minors projects) is borne by the applicant. Mr. Houde wanted clarification about who was responsible for making road improvements. Although he disagreed, it was reiterated that he would be responsible for the work outlined in Mr. Caron’s report as part of the subdivision approval.

Public comments from neighbors Thom Lappin and Darrell Beaupré included a description of drainage problems that they thought were due to the crest of the road and the slope of the road to the West side, leading to water pooling and creating stagnant water. Neighbors felt that the ditch and culvert on the West side of the road needed to be better maintained by the town, and this would improve the drainage situation more than the creation of a new ditch on the East side of the road. Thom also stated that there was a culvert approximately 30' further down the road that could be a better source for drainage than the proposed drainage into an abutter’s field across the road. Terri Crane also commented on the appropriateness of runoff being directed into her field. The question was raised about whether the road agent had visited the site with Mr. Caron, and whether he agreed with Caron’s recommendations. Jane Stephenson said she was not sure if the road agent had been with Mr. Caron when he made his site visit, but would check with the town administrator when he returned.

Planning Board member Mike Sutherland suggested that in the future the town road agent should be with the engineer for future projects involving inspections such as these.

Jane Stephenson went over the completeness review checklist for the subdivision approval. The application for subdivision was found to be complete, and there being no further discussion, a motion was made and seconded to approve the subdivision, with the condition that the road improvements will be made by the applicant at the time he begins house construction this spring. The Board unanimously approved it.
Mylars will be brought in by Matthew Houde and signed at a later date determined by Mr. Houde and Jane Stephenson.

**TORREY SUBDIVISION:** Jane Stephenson opened the hearing, and land surveyor Chris Rollins reviewed the plans for the Torrey subdivision. The three lots currently are on the tax maps as separate lots, but are all on the same deed. The map seemed very complex but the major change was an annexation of seven acres from one lot with the existing house to include the lot across Cutler Road from the house with the existing barns, which will create a larger lot of 15 acres. Mr. Rollins also pointed out a water right-of-way on the map which that is a gravity fed well that was still in use and will not be affected by the annexation.

Public comments included a lot of discussion about Torrey lot #23 which was shown on the map, but was not part of this current subdivision review. Neighbors commented on the fact that this lot is considered "land locked" because it is on a Class 6 road which is no longer town maintained. Chris Rollins shared that he had spent 15 hours digging in the town records to clarify the status of these roads, and his notes about when sections of the road had been “given up” were right on the plan. There was further discussion on the rules and regulations of lots that exits on Class 6 roads, but this discussion was unrelated to the Torrey subdivision under review.

Jane Stephenson went over the completeness review checklist for subdivision approval, and the Board voted unanimously that the application was complete. A motion was then made and seconded to approve the subdivision and it was unanimously approved by the Planning Board.

**PLAINFIELD MASTER PLAN SURVEY RESULTS:** Mike Sutherland went over the results of the survey results with the other Planning Board members that was completed by about 20% of the households as of March 6, 2006. More surveys are still coming in, and results were still being collected and tabulated. The Planning Board discussed how the survey results might be enlarged so we can display the many interesting comments made on the survey at town meeting.

Jane Stephenson closed the meeting at 8:45 pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,

Greg Davini
Members Present: Jane Stephenson Ron Liston
Greg Davini Ruth Cassedy
Mike Sutherland

The meeting opened at 7:10pm

Christ Community Church: At the request of the Christ Community Church, Chairwoman Stephenson signed the RSA 674:39 declaration effectively merging church property lot 259-8 with lot 259-7. Lot 259-8 being a vacant 2.36 acre parcel that was previously owned by Richard Heim. Lot 259-7 being the parcel that contains the Christ Community Church.

Abutter George Koehler was present for both of the following hearings.

Claudine Spencer: Jane Stephenson opened the hearing by reading the posted notice. The application is for subdvision of property fronting on Hayward Road. As proposed the application will create one new parcel, lot 20.1 which will be .52 acres in size and will contain an existing duplex structure. The remaining land (lot 20) contains the applicant’s single family residence and 10.9 acres. The property is zoned VR and is served by public water. The applicant obtained an area variance for proposed lot 20.1 from the Zoning Board of Adjustment (case 05-08) conditional upon the requirement that when no longer held in common ownership the duplex must immediately revert to a single family residence. To accommodate finding #3 in the Zoning Board’s decision (future septic system for the main house) the actual survey of the property has resulted in the proposed new lot containing a slightly reduced area than was originally proposed (22,730 sq ft rather than 24,800). Surveyor Chris Rollins took the board through the details of the application and the details of the slight area change which resulted from better knowledge about the location of the septic tank serving the Spencer residence. Zoning Administrator Halleran explained that it was his view that the slight change in area is not a material change that would have impacted the Zoning Board’s decision. The change is designed to insure that the resulting lots can satisfy the Zoning Board’s condition that each lot be capable of having its own septic system. There being no abutters wishing to speak, the Board found the application complete and a motion to approve was made, seconded and voted in the affirmative.

Terry Sams and Michael Malone Chairwoman Jane Stephenson opened the hearing by reading the posted notice. The application for annexation as required by the Town of Plainfield's regulations. The annexation involves the transfer of two small parcels of land between three lots, fronting on Route 12A, owned by the applicants. As proposed .07 acres will be transferred from one lot owned by Terry Sams (256-29-1) to the adjacent lot also owned by Terry Sams (256-29-2). Next, .07 acres is transferred from land of Terry Sams (256-29-2) to land of Michael Malone (256-26). Surveyor Chris Rollins took the board through the details of the application. If approved, the annexation could possible allow Mr. Sams to be able to obtain a state driveway permit for his new residence (259-29-2) and would provide Mike Malone with additional frontage making the subdivision of his property a possibility. Board members noted that when Mr. Sams had created the lot for his new house, a common driveway with the existing house (256-29-1) was proposed and accepted by the board. Board members decided to defer action on the proposal until the April 17th meeting. Between now and then the applicant may pursue a driveway
permit from the state and Surveyor Rollins will have both Sams and Malone attend the next meeting.

Other Business: The February 20th and March 6th minutes were approved as amended. Halleran distributed materials for the April 3rd site plan review maps for the new KUA athletic fields. To accommodate large number of interested persons expected to attend, the hearing will be held at the Singing Hills facility at 71 King Drive off Stage Road.

The meeting adjourned at 8:45pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,

Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD
April 3rd 2006
Singing Hills Facility

Members Present: Jane Stephenson Ron Liston
Greg Davini Ruth Cassedy
Mike Sutherland Greg Estey

The meeting opened at 7:00pm

Town Administrator Stephen Halleran distributed copies of the Planning Board handbook compiled by the Office of State Planning. In addition, each member was provided the latest copy of the NH Planning and Land Use Regulations booklet.

Chairwoman Stephenson signed the mylar from the Quimby subdivision approved March 6th of this year. Halleran noted that all application fees have been paid and the applicant will work with the town on completing the recommended road improvements while the house is being constructed later this year.

KIMBALL UNION SITE PLAN REVIEW, ATHLETIC FIELD COMPLEX: Chairwoman Jane Stephenson opened the hearing by reading from the posted notice. The application is for five athletic fields to be located on school land between Chellis Pond, Main Street and Route 120. Included in the proposal is a multi-sport artificial turf field with lights. About eighty Meriden Village residents attended the hearing to learn more about this project. Chairwoman Stephenson noted that she would like to see the project reviewed in two major parts: construction and layout issues, and how the facility will be used once completed. Planning Board member Greg Estey recused himself at this time, as he is a direct abutter to the project.

Mike Schafer, Head of School at KUA, started the presentation by explaining that this project is a part of a larger campus master plan that the school hopes to carry out in the coming years. The goal of the master plan is to keep Kimball Union a competitive school among its peers. The KUA administration feels that consolidating all of the outside athletics into one location and improving both the quality of the playing surfaces and extending the length of time the fields can be used during the year are important to the school’s future. Likewise Head of School Schafer noted that the new facility will have benefits to the Plainfield community as well, both from its use and the improved traffic flow around campus that will result the consolidation of all the fields to one location. No sound systems are planned for use on the fields. It was noted that the school now focuses on sport camps during the summer.

Pat Bucellato of Pathways Consulting began the process of explaining the project details to the Planning Board. The approximately 11 acre site will be regraded and terraced to accommodate the proposed fields. The school is now applying for a site specific (alteration of terrain) permit from the state of New Hampshire. A requirement of this permit is that water flowing from the site after the project is completed must be the same as water flowing off the project area prior to the construction. The turf field will have its own piped drainage system that will collect the water from the field and channel it directly into Chellis Pond. The natural grass
fields will be crowned and will essentially drain as they do now.

Brian McCarty of Musco lighting explained how the turf field will be lighted using the company’s latest “light structure green” technology. Four 70’ light poles with approximately 11 to 12 fixtures each will be used to obtain a target of 50 candle power across the entire playing facility. This target is the minimum that is needed to insure safe playing conditions for the expected sports that will use the field (Lacrosse, field hockey, soccer, football). Professional sports facilities that are seen on TV often have a target of 150 or more candle power on the playing surface. The light towers will generate .3 candle power or less at 150’ from the playing surface. The fixtures proposed are endorsed by the International Dark Sky Organization as they emit minimal light above the horizontal plan.

The company that will be responsible for installing the turf field, Northeast Turf, explained that the product used is a permeable synthetic turf that will be stretched over a bed of fine gravel and granular rubber. The field has a warranted life of eight years. The field carpet will cover approximately 80,000 sq ft and will weigh about 350 tons.

At this time Chairwoman Stephenson opened the hearing to questions, a summary of the major issues raised follows. As part of these discussions, the Chair indicated that discussions about the removals of the large pine trees, while important to Meriden Village residents, was not an issue that the Planning Board can influence at this point, work/comments should focus on the proposed fields.

Neighborhood concerns expressed included:

Details of the materials that are used to manufacture the artificial turf and what if any environmental impacts leachate from these materials will have on the adjacent surface water that leads directly into Blood Brook upstream of the Meriden Village Water wells. Likewise, field maintenance including cleaning and sanitization is a concern.

Understanding more about what happens at the end of the field’s useful life would be helpful. Is the old turf material recycled or reused?

The need to understand how existing drainage areas will be impacted from having 11 acres of land opened and graded. The concentration of water flow into Chellis Pond is a concern. Currently that water reaches the pond from either flowing over grass or through gravel.

Given the amount of engineering that is part of this project, having the proposed work reviewed by a town hired engineer was requested by Marc Rosenbaum

The plan seems to include little if any additional off street parking, besides the 400 spaces in the lot adjacent to the arts center and the hockey rink. How spectators would be directed to use the parking lot and access the playing fields was questioned, particularly during night games.

The proposed landscaping plans have very few details and need a lot of work to be complete.

Use of the field, whether lighted or not needs to be clarified. Head of School Schafer noted that he could not see using the lights more than twenty times each year.
More details on the proposed light impacts. Specifically Mike Sutherland asked that plans be provided that show where light emissions would be down to zero. It was noted that the closest field that will use the proposed lighting technology is located at Exeter High School.

As a result of all of these comments and as the hour was approaching 10:30pm Chairwoman Stephenson recessed the hearing until May 1st here at Singing Hills. Prior to that meeting the applicant will provide the following information to the board:

1. MSDS sheets for the turf field components and cleaning solutions.
2. Enhanced drainage calculations and details on how water will be directed into Chellis Pond.
3. Details about the parking plan, including lighting, signage and improvements to the pedestrian access from the lot to the fields.
4. Detailed statement about the proposed use of lights on the turf field. Breakdown should include what months KUA proposes using the lights, how many nights for practices, how many for competitive games, weekday versus weekend use, hours, a statement about whether rental users are allowed to use the lights.
5. A complete set of lighting plans including fixture intensity at 80 degrees from nadir and at 90 degrees from nadir expressed in candela per 1000 lamp lumens. In addition, any summary description of the percent “uplight” we can expect from fixtures would be appreciated.
6. A light pole tower balloon test needs to be scheduled (a Saturday if possible).
7. A detailed landscaping plan for the entire project including the stream bank.
8. Details of any structures on the fields, including storage buildings or bathrooms.
9. Details on how construction of the turf field will be handled including trucking access point, number of yards of material that will have to be trucked to the site and length of time the construction process will be underway (repeat this item for the remaining three playing field phases).

The meeting was adjourned at 10:45pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,

Stephen Halleran
The April 3rd meeting minutes were approved as amended. Local UVLSRPC representative Des Hudson attended the meeting for the discussion on the Master Plan Survey results. In addition, Des has agreed to become a Planning Board alternate and will be sworn in by the Town Clerk later this week.

**Sams/Malone Annexation:** Halleran reported to board members and abutter George Koehler that he has been informed by both the surveyor and the applicant that a letter withdrawing the application is being forwarded to the town office. This being the case and neither applicant being in attendance, the meeting moved on to the next agenda item. Halleran will next report on this case at the May 1st meeting.

**KUA Athletic Field Siteplan Review:** Halleran reported that Pathway Consultants has proposed this coming Saturday for the light tower “balloon test”. Board members determined that the following Saturday (4/29) during the morning hours would be better for board members. Halleran will report this information to Pathways Consultants. The project’s review continues on May 1st at Singing Hills.

**Natural Resource Inventory:** Jane Stephenson reported that the Natural Resource Inventory (NRI) subcommittee has been asked to attend the start of the May 1st meeting to give the board members a brief presentation about this important ongoing project. Mike Sutherland noted that the NRI subcommittee is also planning to reschedule the community workshop for later this summer. This past Saturday’s workshop was not as well attended as the NRI committee had hoped.

**Master Plan Survey:** The Planning Board took time to review the full details of the completed master plan survey. Concepts that were heavily supported from those responding to the survey included: 1) Enhanced regulations for clear cut timber harvests, particularly were water quality was at issue, 2) Enhanced protection from development for back land areas, 3) Location of residential development near existing town services. 4) Local small home based business uses were strongly supported, however, the survey showed concern about future large businesses being located in Plainfield.

Board members suggested that perhaps studying other area town’s zoning ordinances might provide some insight on how to continue to work these concepts into our evolving zoning ordinance.

The meeting adjourned at 9:00pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,
Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD
May 1st  2006
Singing Hills Facitly

Members Present:  Jane Stephenson  Greg Davini  Ruth Cassedy
                  Greg Estey  Des Hudson  Robert Taylor
                  Ron Liston

The meeting opened at 7:00pm.

Natural Resource Inventory: Natural Resource Inventory Committee members David Grobe and Shelley Hadfield provided a brief review of the progress to date on developing a natural resource inventory for Plainfield. It was pointed out that Planning Board member Mike Sutherland, who is currently away, has been very involved in this project. The group hopes to hold a second public workshop on the project in the late summer early fall. Once completed, the inventory will help establish both conservation and development goals throughout the community. The town’s evolving geographic information system is a valued tool in providing a visual representation of the inventory. By adding various data layers (hydric soils, prime agricultural lands, wildlife corridors, etc) to Plainfield base maps, board members will be able to see those areas where high priority items exist and overlap. Both David and Shelley explained that when used to review specific applications, the inventory is intended to provide indicators and is not a substitute for site visits. Chairwoman Stephenson thanked the Shelley and Dave for the update and indicated that the NRI will, when completed, be a valued part of our local planning process.

Kimball Union Academy Athletic Fields: Chairwoman Stephenson reopened the hearing on the four athletic field proposal which includes one artificial turf field to be outfitted with four 70’ light towers. Jane advised all those in attendance that the applicant is video taping the hearing. As he did at the first hearing, Board member and KUA abutter Greg Estey recused himself from this case and joined the audience.

Jane Stephenson updated the group by indicating that the applicant, this past Saturday, provided a balloon test to visually demonstrate the proposed light pole locations and towers heights. The date and time of the test was publicized and Jane hopes that all who wished had an opportunity to visit the site during the test.

Pat Bucellato from Pathways Consulting noted the applicant’s presentation tonight involved reporting back on the specific information that the board requested as a result of the first meeting. Each board member has received that information as part of the meeting mailing for tonight.

Starting the presentation Northeast Turf explained several turf related reports that have been added to the file. Their testing shows that the turf field acts as a filter to rain water resulting in a cleaner product exiting the drainage system than would otherwise have existed. In addition, the company provided test results concerning the rubber aggregate used in the field construction. The company noted that there are 1,500 installation of the their product nation wide. Generally speaking the life of the fields is 10-12 years, typically maintenance involves washing with hot water. There are cleaners available for the turf, however, most customers use water.

It is expected that constructing the field will require between 110-120 truck loads of material
being delivered to the site.

Meriden resident Marc Rosenbaul thanked the company for providing the MSDS sheets and noted that these type of sheets refer to hazards for humans only. Further Marc noted that the rubber product does include DEHP which is a suspected cancer causing agent in humans and a known cancer causing agent in other animals.

To reduce the potential for negatively effecting surface water quality, David Grobe asked if the applicant has considered using a dry well system for handling the field run off. Pat Bucellato noted that this has not been considered, based on boring data it appears that the subsoils at the site are too densely compacted to allow for such a system to work effectively.

Brian McCarty of Musco lighting explained the now completed detailed light study for the proposed field. Responding to a question from board member Des Hudson, Brian indicated that lower the light towers significantly impacts outer edge light spillover and raising the towers over the proposed 70' has a minimal impact on further reducing the spillover. Pat Bucellato reported that, in his view, from many angles the light poles do not extend above the horizon and will therefore blend into the surrounding hillsides during daylight hours. It was pointed out that a balloon on a string is not an accurate representation of what the actual poles with 13-15 light fixtures will look like.

Returning to the light study, Brian McCarty further explained that this time the spill over from the lights reaches approximately zero candle powers at 150' from the field. Jane Stephenson said that she thinks its unreasonable for residents to think that the lights will not be noticeable when turned on, and that controlling the hours of the use of the lights is an important part of any approval. Marc Rosenbaum questioned whether approval of this project was already implied. Stephenson responded that this was not the case, but that, if approved, a detailed understanding of when the lights were to be used would be necessary.

William Flynn, landscape architect, reviewed the updated landscaping plan for the project. The plan involves three main areas, NH Route 120, Main Street and the replacement of the riparian buffer along the Chellis Pond drainage way. See attached report for details.

White oaks, pines, and maples along with some under story plantings are all part of the plan. Resident Margaret Gibson started a general discussion about the goal of the plan, whether it was to screen the fields from Main Street or to spatially define the area. Mr. Flynn made it clear that his goal with this plan was to define the athletic field area, yet making it clearly part of the entire view shed which is the Kimball Union campus. Screening the fields was not the goal.

William Flynn reported that he is still working on the details of improving the walking path from the hockey rink parking lot to the field complex, but that this path will include a small wooden bridge, lighting similar to the fixtures used on Main Street. More details on this will be forthcoming. Aside from ADA parking, the hockey rink lot continues to be the proposed parking facility to service the fields. Head of Operations Doug Plummer noted that when the fields are used it will be the off season for the hockey rink.

Speaking to the issues of existing and proposed structures, Head of School Mike Schafer reported that the Penniman barn is to be dismantled and relocated. It is hoped that the barn can be converted to a woodworking shop to be located near the arts center. The existing small brick building on the site is to be moved and used as bathrooms for the new fields. Its new location is now shown on the updated plans.

Marc Rosenbaum asked that the project limits be clearly defined, he noted that some of the plans on file and the plans discussed this evening seem to be in variance with one another. Where
cutting and filling starts and ends is an important piece of the project. Pat Bucellato acknowledged
that there are some decisions that still need to be made about retaining walls and berms, but that
regardless of those outcomes the project will function as designed.

At this time board members determined that a peer review of the project by town engineer
Lou Caron would be valuable to the process in helping the board understanding all of the engineering
data. Halleran was instructed to have the review done as quickly as possible. Lou Caron will be
asked to attend the May 15th meeting to report on this work to date. The applicant will reimburse
the town for all costs associated with the review.

Halleran, at the board’s direction will also ask Fire Chief David Best and Police Chief
Gordon Gillens to review the project from each of their department’s perspectives. The hearing was
recessed at 9:45pm until May 15th at 7pm, at the Coffin meeting room in at the Kimball Union
Academy dining hall.

**Other Business:** Halleran reported that Kevin MacNamara has now applied for the building permit
for his new shop (40’X60’) that received site plan approval last September. The required landscaping
has been installed and to date there have been no issues with abutters. The business has operated
there over the last six months. If allowed, Kevin would like to move the shop across the driveway
from the location approved on the site plan. Direct abutter Tim Ball has indicated this is not a
problem for him and might even reduce the visibility of the structure from this property. It was noted
that this change will likely make the building more visible from Stage Road. Board members agreed
to the change with the condition that no trees be removed from the bank facing stage road and that
additional screening be installed along this area.

The meeting adjourned at 10:00pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,
Stephen Halleran
May 15th 2006
Coffin Meeting Room, KUA Dining Hall

Members Present: Jane Stephenson Greg Davini Ruth Cassidy
Des Hudson Robert Taylor Mike Sutherland
Ron Liston

The meeting opened at 6:00pm with a site walk of the proposed athletic field complex with town engineer Lou Caron. Attending the walk were: Hugh McGraw, William Flynn, Attorney Bernie Waugh, Pat Bucello, Lou Caron, Greg Davini, Mike Sutherland, Des Hudson, Ron Liston, Betsy Ryebeck-Lynd, Marc Rosenbaum, Stephen Halleran. The group parked in the hockey rink lot and walked down the proposed path over the small stream exiting from Chellis Pond and onto the project site. Landscape Architect William Flynn explained the proposed path improvements which include five light fixtures of the same design as used on Main Street. The path will be gravel and graded so that it does not exceed a slope of more than 8%. It was noted that the site walk is occurring directly after the area received nearly 5" of rain in the past two days. Engineer Caron explained that during construction he is recommending that significant temporary erosion control be installed to protect the surface water along the western edge of the project.

Once on the site the group walked the perimeter of the project area with Lou Caron explaining the various proposed cuts and fills along with the drainage improvements. Near the back of the site the group noted the high water table and the existence of a vernal pool in the northeastern corner of the project area, just over an existing stonewall. A clay barrier will be installed to insure that the project does not drain the vernal pool.

At the former Duty Stickney house engineer Caron explained that a cut of about 5' is proposed with a retaining wall and fence to keep residents of the house from falling off their back lawn. The wall will come within about 15' of the existing rear deck of the house. Halleran noted that as part of the final review some additional information will be needed about the lot lines for this property which was recently purchased by the school. Planning Board members asked that given the extreme cut at this location, information about the septic system for the house would also be needed. It was not immediately clear whether the house is on the waste water system or has a private system.

Completing the perimeter walk, it was noted that the brick building in the center of the project area will be relocated to the western edge the project and used as restrooms.

The group moved up to the KUA dining hall for the continuation of the hearing on the project.

7:10pm.

The board’s May 1st minutes were approved as amended.

Jane Stephenson opened the recessed hearing and asked Lou Caron to review his initial work with the group concerning the peer review of the engineering for this project. Lou went over the details
found in his report. See attached. Sediment control and drainage plans for the turf field are the areas of greatest concern for Lou.

Pat Bucellato from Pathways indicated that based on grading recommendations from Lou Caron he has lowered the practice field another one to two feet which has allowed the project to become a balanced site. This being the case, the only materials to be brought on the site will be the bedding materials for the turf field. Pat noted that he has gone over all of the recommendations made by Lou Caron and he is in agreement with all of them. The school plans to have test pits dug in the next few days to see if the proposed additional drainage that Lou has recommended is feasible.

Marc Rosenbaum and Lee Lynd continued to raise concerns that the water from the drainage system will result in a concentrated increased flow into Chellis Pond and the adjacent small stream and that water quality issues will arise. Lou Caron supported Pathways position that the water will not be sufficient to result in environmental damage. Lou pointed out that the turf field will not receive fertilizer treatments and will thus reduce the nitrogen and phosphates going into the adjacent wetland.

Head of School Mike Schafer added that one change the school would like to make is that ADA parking for the facility will be located adjacent to Frost House.

Abutter Kay MacLeay requested that no invasive plant species be used on the project. William Flynn responded that none are planned.

William Flynn added that the proposed path lights would be directly wired to the field lights and would be on or off depending on the use of the turf field lights. A delay could be set to allow spectators time to reach the parking lot prior to the lights turning off.

Lou Caron will continue his review of the project. The following items are outstanding: 1. State site specific permit, 2. State DOT permit to connect into the existing catch basins on Route 120, 3. Information on the lot lines and septic system status for the Duty Stickney house, 3. Test pit data for the field drainage.

Des Hudson moved to find the application complete, conditional on the three items above, the motion was seconded and voted in the affirmative. Marc Rosenbaum questioned the process given that the application was not complete. Des noted that the designation simply means that the board has reviewed all aspects of the proposal and has indicated which items are in hand and which it expects to have prior to making any final decision.

Halleran was instructed to move forward with noticing the final hearing on the project, which will take place on June 5th.

Chairwoman Stephenson focused the discussion on the operational aspects of the fields. There was some confusion as to how many times each year KUA anticipates using the lighted field. Head of School Mike Schafer indicated that the current usage proposal is the one provided by Hugh McGraw dated May 2nd. Copy attached.

Members of the public present requested that any approval be initially very conservative until the full impact of the lights is known. It was suggested that part of the approval might be a future
review of the project once it has been built and is up and running for a period of time. Paul Merchant indicated that while he does not object to KUA’s proposed fields, he has an observatory at his home and viewing the night sky is important to him and his family. What impact the lights will have on that is not known.

Mike Schafer added that the lights will likely be used about twenty times a year, mainly in March, October and November. Mike Schafer indicated that the school has no objections returning to the board in the future to review the completed fields and lights once all are operational. He did urge the Planning Board to grant any approval in such a manner that the fields can be used in a reasonable manner. Hugh McGraw noted that the fields are not intended to be viewed as a negative thing for the community, but rather as a positive place for kids to become involved in athletic activities.

The initial hearing was closed at 9:20pm. The project will move into its final review phase on Monday June 5th at the Plainfield Town Hall in Plainfield Village.

**Other Business:** Halleran reported that the Planning Board will be involved in a site plan review of a proposed 70’X120’ steel building to be built on land owned by Matt Jackson off Route 12A. Board members indicated a sitewalk for this project would be helpful. The building will likely be quite visible from Route 12A and the Plainfield Village area.

The meeting adjourned at 9:30pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,
Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD

June 5th    2006
Plainfield Town Hall

Members Present:    Jane Stephenson    Greg Davini    Ruth Cassedy
Des Hudson    Robert Taylor    Mike Sutherland
Ron Liston    Greg Estey

Matt Jackson Site Visit Route 12A: The Planning Board met on the proposed site for Mr. Jackson’s 70’X120’ steel building to be used for storage and repair of his personal car collection. No commercial business is proposed for the site. The site is directly across from 823 Route 12A. Abutter and Planning Board member Mike Sutherland noted that he is recusing himself from this proceeding. Matt and his consultant Edward Friedman of Trumbull Nelson walked the board around the site indicating the location of the four corners of the proposed building. The gable end of the building will face Route 12A. As proposed, the structure will stand approximately 27’ tall to the roof ridge top. The building will be green in color and will have a very flat pitch to the roof. Abutter Todd MacDonald noted that he has right of way over the property, which he reserved prior to selling the parcel to Matt Jackson.

Plainfield Town Hall

Matt Jackson Site Plan Review: Chairwoman Jane Stephenson opened the posted site plan review hearing for the proposed 70’X120’ building. Planning Board member Mike Sutherland, repeated that he has recused himself from the board for this application, as he is an abutter. Mike explained that his main concern with the project is the proposed height of the building, which at 26’ makes it taller than many of the large box stores. The building is to be located about 330’ from Route 12A. Potential future use of the building as a business was discussed. Matt noted that his plans are entirely for personal use, no business. Board members made it very clear that, if approved, the size of the building in no way implies any future approvals for a business use. Any proposed use would have to be judged by the Zoning Board on its merits at that time.

Cheryl Grabe explained that much of her concern about the project is centered on how sound travels on that hill. Maintaining a quiet neighborhood is important to her.

Ed Friedman explained the construction of the steel building and the details of the proposal. The building and its roof will be green. Outside lighting will be limited to motion activated lights mainly at the rear of the building. Any lights for the building will be full cut off fixtures.

The applicant indicated that if it would help in the process he is willing to have his design team consider moving the building a little further back on the lot and lowering the front half of the building by eight feet. To assist with this discussion, it was determined that a balloon test would be performed on Saturday June 10th after 10am. The applicant will fly a balloon at the proposed height of the building.

Board members asked that for the next meeting, additional information be provided with regard to landscaping and drainage.

Kimball Union Academy Site Plan Review athletic Fields, see April, May minutes for background.
Jane Stephenson opened this final hearing on the proposal. Business Manager Hugh McGraw provided the board with a letter dated June 5th detailing anticipated construction activities. See file.

Pat Bucellato explained the new information provided since the last meeting. Many of the
changes that have been made are designed to address recommendations made by Town Engineer Lou
Caron. See file.

The board held a procedural discussion concerning how to break the project into manageable
bites. It was determined that the board deliberations would initially focus on construction issues
including the construction of the lighted artificial field. Use of the fields and lights would be handled
next.

This being the case member Des Hudson moved to approve the construction of the field subject
to the following conditions:

1. The applicant shall fully comply with this Application submissions and all the pertaining plans
and documents submitted by the applicant, and with the Site Plan Regulations and the Zoning
Ordinance of the Town of Plainfield. All required state permits must be obtained before
construction begins.

2. Approvals of Site Plan is conditioned upon and limited to the proposal and plans as updated
per May 24, 2005 Revision (see Index of Plans on Site Plan) and supporting documents
submitted and affirmed to by the applicant and/or his professional representatives on May 24,
2006 in response to concerns raised at May 15 hearing. Any variation from the plans, proposals,
and supporting documents, except for minor changes that do not affect approval standards, are
subject to review and approval in a formal public hearing after proper abutter notification. It
has been agreed that the merger of lot 103/6 with lot 103/4 is not required and will not occur.
Approval is conditional on final sign off of plans by Town Engineer including revised drainage
plan.

3. Minor changes in approved plans necessary to address field conditions may be approved by the
Town Administrator/Code Enforcement Officer or Town Engineer provided that any such
change does not affect compliance with the standards or alter the essential nature of the
proposal. The Town Administrator/Engineer/Code Enforcement Officer shall endorse any
such change in writing on the approved plan.

4. Town Engineer will submit proposal on monitoring of project implementation required to
ensure Town requirements are met. Applicant will review/approve and post bond for the
associated costs.

5. A bond will be required to ensure completion of landscape per plans. Town Administrator to
resolve amount with Applicant.

6. No snow shall be stock piled within 100 feet of Chellis Pond and the associated stream.

7. A review of the Phase II of the landscaping will be presented to the Planning Board at a public
hearing no later than 1 August 2007.

8. KUA will inform the abutters by letter or circular of the construction schedule prior to job start
on each phase of the job.

9. A separate motion will be proposed to cover the operations aspects of the application, including
lighting. The Planning Board has as an objective to achieve a balance between the safe and
secure use of the playfields and the Town’s objective to preserve the rural atmosphere and dark
skies of the community. The Planning Board proposes to conduct a further public review of the
impact of the Turf Field lighting in June 2007. At that time further measures to decrease light
pollution, degradation of the night sky and/or glare may be required. In addition further
restrictions of hours of use may be required.
After a full discussion the motion was approved on a unanimous vote. Halleran noted that
based on this approval the record indicates that the following items must be completed
prior to the start of construction: Issuance of a NH DES site specific permit, receipt of a
landscape bond, receipt of final report by town engineer including a review of all final
changes, receipt of a proposal for environmental monitoring of the project during
construction by town engineer Lou Caron and subsequent approval by Kimball Union..

The discussion now turned to operation details of how the lighted turf field will be utilized.
Chairwoman Stephenson asked her board how they felt about the appropriateness of a
lighted field. While acknowledging KUA's point of view concerning the need for lights,
board member Cassedy voiced reservation about that need and expressed concerns about
the potential long range impact, both aesthetic and functional, of the lights on the
neighborhood. A majority of board members felt that having a lighted field as part of a
private boarding school was not inappropriate. Board members also acknowledged that the
applicant has made significant efforts to minimize the impact of the lights on the Meriden
Village.

Chairman Stephenson moved to approve the use of the field with the following conditions:

1) Field lights will not be used from Thanksgiving break to February 20th 2007.
2) Field lights will not be used from commencement to the start of fall practice schedules.
3) Field lights may be used for six fall night games.
4) Field lights may be used for six spring night games.
5) Field lights will be turned off by 9pm, path lighting by 10pm.
6) Field lights will not be used on Wednesday or Sunday nights.
7) Field lights will not be used before 4pm or after 9pm.
8) No electronic sound amplification devices will be used on any of the proposed fields.
9) Field lights may not be used by renters of the field.

The project will be reviewed by the Planning Board in June of 2007 with notice to both
KUA and abutters. The purpose of this hearing will be to evaluate the impacts of the lights
and to see what if any modifications of the above conditions would be appropriate.

The motion was approved by a unanimous vote of the Board. The June 5th meeting
adjourned at 9:00pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,
Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD
June 19th 2006
Plainfield Town Hall

Members Present: Jane Stephenson Greg Davini
Des Hudson Robert Taylor
Mike Sutherland Ruth Cassidy
Ron Liston

James Griffiths Subdivision: Chairwoman Stephenson opened the hearing by reading the posted notice. The project involves 191 acres with buildings currently inventoried as tax maps 212-1 7.0 acres and 212-2 184.0 acres. If approved, this land will be split into three lots. Lot 1-11.07 acres with buildings, lot 2-21.68 acres with buildings and lot 3-158 acres undeveloped. The property is zoned RC-1. Mr. Griffiths explained that this project is designed to accommodate his family, no new houses are planned, although an existing house will be replaced and perhaps some agricultural buildings may be added. All lots satisfy the four to one ratio, no new driveway curb cuts are proposed. There being no abutters wishing to comment, Chairwoman Stephenson moved to find the application complete. The motion was seconded and voted in the affirmative. A motion to approve was made seconded and voted in the affirmative with the condition that the ten year rule language concerning future subdivisions be added to the plan.

Matt Jackson Site Plan Review: Chairwoman Jane Stephenson reopened the posted site plan review hearing for the proposed 70' X120' building. Planning Board member Mike Sutherland, repeated that he has recused himself from the board for this application, as he is an abutter.

Board members discussed the results of the balloon test which was designed to demonstrate how the building will be viewed from Plainfield Village. Board members noted that the balloons were visible from the Stage Road ballfield and the Plain cemetery. Matt Jackson indicated that after considering several building height modifications the building is remains in size and shape as originally proposed.

Abutter Todd MacDonald added for the record that he has some private right of way issues that he needs to work out with Matt Jackson. The has a right to access his back field over Matt’s garage property which was formal owned by Todd and his wife Deena.

Matt Jackson explained that since the last meeting a landscape plan has been designed for the project. In addition, the building will be pushed back some 4' to 6' along the Route 12A side. The landscape plan includes the planting of about a dozen 8' to 10' tall whitepines. After much discussion it was determined that a more detailed landscape plan the southeastern corner of the building will be necessary. This plan to include a planting of trees or shrubs at the building pad elevation to help break up the profile of the structure.

Drainage from the site will be handled with both an open ditch system and a 600 gallon dry well. The dry well is designed to slow down the water discharge over the embankment. The access drive is located to the south and is higher than the ditch so run off from the south side of the building should not impact the MacDonald house.

Halleran offered that one of the frustrations with this application has been that the town’s site plan review regulations are not intended to regulate private buildings that are to be used for personal use. Board members agreed noting that it might be time to consider a
requirement that all buildings over a certain size go through site plan review. Making the
town’s design guidelines mandatory for all buildings needing site plan review was also briefly
discussed. Board members noted that all of this is real balancing act between the wishes of
the community as a whole and the rights of private landowners to use their property.

There being no other comments, Hudson moved to approve the site plan as
amended, mainly that the building will be moved back a minimum of 4’, landscaping to be as
presented on the landscaping page with the addition of a more specific plan for the south
east corner of the building, all outside lights on the property will be full cut off style fixtures,
vehicle parking will be to the rear of the building. The motion was seconded and voted in
the affirmative.

Other business: Surveyor Tom Dombrowski met with the board to discuss the possibility
of a three lot subdivision of the Cullinan property on Whitaker Road. The 54 acre parcel is a
mixture of fields and forested land with some wetland areas. Board members encouraged
the use of building envelopes and the use of a common driveway. Consulting with the
Conservation Commission was also encouraged as well as the use of the town’s
Conservation Design subdivision process. Mr. Dombrowski will take this information to the
owner before moving forward with any project.

The meeting adjourned at 9:00pm. The Board’s next meeting will be July 17th at the Meriden
Town Hall.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,
Stephen Halleran
Members Present: Jane Stephenson, Greg Estey, Robert Taylor, Ruth Cassedy, Ron Liston

Townline Equipment Site Plan Review: Jane Stephenson opened the hearing on the proposal which involves the replacement of the existing 6,500 sq ft main shop building with an 18,000 sq ft new shop. Pat Buccellato of Pathways Consultants walked the board through the proposal. The new shop will be located exactly where the current one is, but will of course be much larger. The new building is no closer to the state highway and meets all required state and local setbacks. The retail front of the structure will be the north gable end and will include a covered porch. Inside the building there will be the business office, a new show room, parts counter and sales offices. The repair shop will be much larger and include many safety enhancements for the mechanics, and allow much of the work that is now done outside to be done inside. The proposal includes a waiver request of the town’s lot coverage requirement of no more than 20% impervious surface, as planned lot coverage is 22%. Likewise, a waiver request of the sign ordinance requirement that allows no more than two pole signs is requested. Three are proposed. Building signage is as follows: the east side of the building (Rte 12A) will have a sign that reads Townline Equipment. The north end of the building will read Case. The Townline Equipment sign on the existing pole barn will be removed. The business will have a total of 240’ square feet of signage, the ordinance will allow 256 sq ft. The three illuminated pole signs would each have one product name on them, Kubota, Case, New Holland.

Halleran noted that the sign ordinance and lot coverage issues are zoning ordinances and cannot be waived by the Planning Board. This being the situation Pat Buccellato and Robert Marrazzo agreed to modify the application to meet the 20% lot coverage requirement and the Case and New Holland sign poles will be combined eliminating one pole, thus bringing the proposal into conformance.

Based on the building size site plan review regulations require more than 100 parking spaces; 48 are proposed, 30 for employee and 18 for customers. A traffic survey by the owner indicates that even on the busiest days 18 customer spaces will be more than adequate. This waiver will allow for the maximum green space.

Fire Chief Currier noted that from a site layout he feels the new proposal is superior to the existing layout. Robert Marrazzo indicated that prior to occupancy of the new building all applicable fire and life safety codes will be satisfied. Townline is hiring a separate design company to handle this part of the project. Mr. Marrazzo went on to explain that hazardous waste material on site is limited to parts cleaner fluid which is collected and disposed of by an outside contractor. Townline maintains a state required spillage plan. Used oil is stored in 55 gallon drums with secondary containment provided for each barrel.

Responding to a question from Ralph Demasi, Mr. Marrazzo indicated that all steam cleaning will be done inside in a designated area of the new shop. Abutter Richard Colburn and Ralph Demasi both raised concern about snow storage areas indicating that in the past snow storage has been a challenge on the site. Pat indicated that snow storage areas can be designated for the site.
With the exception of some recessed lighting on the retail front “porch” no additional lighting is proposed over what is currently used on the site.

In moving forward with the application, board members requested the following additional information: 1) An amended signage breakdown showing how the proposal conforms to the ordinance. 2) A copy of the businesses hazardous material safety plans, 3) A lighting plan for the new porch, 4) A cursory review of the drainage and site plan by town engineer Lou Caron

The site plan review was recessed until August 7th at 7pm.

Kevin O'Reilly: Preliminary discussion on a two lot subdivision of the nine acre lot previously owned by Kathleen O'Leary at 6 Stage Road. Mr. O'Reilly, the new owner, is proposing to divide the VR zoned property into two lots; the existing barns will sit on a 7-8 acre lot and the existing brick house will be on a 2-3 acre lot. As part of the proposal the farm land would be protected by a deed restriction. Initially Mr. O'Reilly considered three lots, however, he now feels that two is more in keeping with the existing development on the site. Board members supported the deed restriction idea. It was noted that some of this land is within the Meriden Village Water District protective well radius.

Cullihan: Surveyor Tom Dombrowski held a second meeting with the Planning Board concerning the division of this 54 acre Whitaker Road property into three lots. Owner Ed Cullinan was in attendance. Three driveways are proposed and have been reviewed by the town’s Road Agent Ken Stocker, who in this case feels that three access points minimizes the impact on the land by reducing the number of trees that must be removed. Building envelopes have been proposed to set the new houses out of existing fields and away from the roadway. Private covenants between each of the lots will protect view sheds and provide vegetative buffers from the roadway and each of the houses.

Board members felt this current proposal was much better defined than what was discussed last time.

The meeting adjourned at 9:00pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,
Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD
August 7th 2006
Plainfield Town Hall

Members Present: Jane Stephenson Greg Estey
Robert Taylor Mike Sutherland
Ron Liston Des Hudson

Townline Equipment Site Plan Review Continuation: Chairwoman Stephenson reopened
the hearing which involves the replacement of the existing 6,500 sq ft main shop building with
an 18,000 sq ft new shop. A recently received letter from Ralph Demasi was entered into the
record and distributed to board members. In the letter Mr. Demasi asks the board to defer
action on the proposal pending an additional review by an engineer he has retained.

Pat Buccellato of Pathways reviewed the details of the sitewalk done with Town Engineer Lou
Caron. He noted that the revised application now includes Lou Caron’s recommendations.
These include improved drainage catch basin structures for the inlet areas of the infiltration
system and a lengthened paved apron onto Route 12A to reduce stones from the Townline lot
being pulled onto Route 12A. See the Lou Caron report in the application file. The drainage
system as revised has been deemed adequate by the town engineer. Board members questioned
whether the employee parking could be moved further to the back of the lot. Owner Robert
Marrazzo indicated that this would not be a problem if board members felt that arrangement
would be an improvement. Discussion went back and forth about which of the two areas was
the most appropriate. Moving it to the back of the lot has the potential to impact neighboring
residences. In its proposed location the parking is well screened from Route 12A by an existing
building and a vegetative buffer with Ferry Hill Road.

Pat Buccellato went on to explain that snow storage is now proposed for three areas. See plans.
Two smaller sites are located to the north of the new building, with a larger area to the south
of the building. Abutter Ralph Demasi requested that the board provide his property additional
protections from both the storm water run off from the Townline property and the proposed
snow storage areas which, in his view, both have the potential to impact his property. In
addition, Mr. Demasi does not feel that the property, as proposed for development, will satisfy
the town’s 20% lot coverage requirement.

After much discussion about elevations and water flow, the applicant agreed to install three
earth berms to insure that neither storm water runoff or melting snow impacts adjacent property
and the small stream that runs through the property.

Pat Buccellato reaffirmed that Pathways has calculated the lot coverage as outlined in the zoning
ordinance and as revised, this plan now meets the requirement.

Nancy Franklin stated that this business supports the agricultural community in Plainfield. She
does not see a problem with either the proposed structure or its proximity to Route 12A. Other
members of the public in attendance questioned the appropriateness of a business this size in
the Village Residential Zone, and whether or not approving this plan would encourage other
large business to locate in the village. Those in attendance were made aware of the time lines
for proposing changes to the zoning ordinance. It was noted that the Village Residential Zone
is the least restrictive zone in the town’s system and is not designed to function as a historical
preservation district.

A discussion followed about a landscape plan that could break up the 170' length of the
proposed building that will parallel Route 12A. Existing landscaping is to remain in place. The
applicant agreed to add additional trees and shrubs to improve the impact of the long side of
this large building. At this point the public hearing was closed and board members began their
deliberation on the proposal.

Results of this deliberation are as outlined below:

Board members first discussed proposed lighting for the new building and grounds. All lighting
fixtures will meet national standards for full cut off fixtures.

Noise from the business will be reduced, as much work that is done outside will now be moved
inside the new structure.

Reacting to an earlier statement from a resident of Cornish, Board members determined that
this project does not have regional impact as outlined in RSA36 54-58.

Based on testimony at the hearing, employee parking will be as proposed and will not be
relocated to the rear of the lot. In addition, based on the existing status of this business which
was established in 1971, the available data provided by the applicant on historical customer
traffic, the proposed customer parking plan was accepted, thus allowing for more green space
directly adjacent to the building. It was noted that with the new structure no customer or
employee vehicles will be parked adjacent to Route 12A along the east side of the building.

A final engineering review will occur relative to the three berms now proposed to be installed
to supplement the proposed drainage plan.

The proposed landscaping plan, will now include at least four additional deciduous trees along
the east side of the building facing Route 12A.

Before occupancy the building will undergo, at the applicant’s expense, a complete life safety
code review demonstrating compliance with applicable codes.

The business’ spill prevention and handling plan is now on file at the town office.

The above being agreed to, member Hudson moved to approved the site plan. The motion was
seconded and voted in the affirmative.

Resident Judy Atwater asked that the Planning Board consider a six month hold on all business
applications to the town pending needed adjustments in the zoning ordinance. In Judy’s view
the town regulations are not protecting the town’s villages from large scale development.
Edward Cullinan subdvision of property accessed from Whitaker Road. Chairwoman Stephenson opened the public hearing by reading the posted notice. The project involves 54 acres of land currently inventoried as tax map252 lot 9. If approved, this land will be split into three lots. Lot 1-11.65 acres, lot 2-11.65 acres and lot 3-30.85 acres. The property is zoned Rural Residential and is not served by municipal water or sewer. Survey Dombrowski noted that the plan now includes building envelopes where the applicant has agreed all development will take place. Areas outside the envelopes, not needed for driveway development, will be left in the existing undeveloped state. No further subdivision of the property will be allowed as well. Owner Edward Cullinan confirmed these statements.

Abutters Richard Horne and John Burbee noted that they do not oppose the project, but they are concerned about additional water running onto their property. Currently, the ditchlines on Whitaker Road need cleaning and the existing drainage ways are not working as designed. Halleran noted that he will have the Road Agent look into this and to make sure that existing culverts are properly sized. If the cross pipes require up sizing the applicant may be asked to participate in paying for some of the cost of that upgrade.

Each lot will have its own driveway, well and private septic. The owner plans to impose private covenants on each lot. However, with the exception of the building envelopes shown on the plan these will not be town issues.

There being no other questions or comments a motion to find the subdivision complete was made seconded and voted in the affirmative. A motion to approve the application was approved. Pending a correction to the location of a properly listed abutters property, a mylar and final prints for signing will be forwarded to the town office.

The meeting adjourned at 9:47pm.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,
Stephen Halleran
Alice Jordan: Chairwoman Stephenson opened the public hearing by reading the posting. The project involves 104 acres of land located at 228 Westgate Road currently inventoried as tax map 255-06, 260-03 and 260-05. If approved, this land will now be inventoried as two lots: Lot 1-56.74 acres containing the existing residence and lot 2-46.76 acres containing agricultural buildings and improvements. The property is zoned Village Residential and Rural Residential respectively and is not served by municipal water or sewer. Donald Jordan explained the project to the Planning Board. Basically the division will clarify both the town’s assessing and land use records to show that the land on the west side of Spencer Roads including the existing house is one lot and the remaining land mainly on the east side including the barns is a second lot. Abutter Leni-Lyn Johnson questioned whether there were any plans for future subdivision. Mr. Jordan indicated that at this time there are no plans, but no restrictions on further subdivision are being proposed by the applicant. There being no other questions, a motion was made and accepted to find the application complete. A motion to approve followed and was voted in the affirmative.

Minute Approval: Catching up on housekeeping, the Planning Board approved the May 15th, June 5th, June 19th, July 17th, and August 7th minutes as amended. Chairperson Stephenson signed amended copies for the file.

Zoning Changes: The Planning Board started its annual review of the town’s planning regulations. These rules fall into three areas: Zoning, Subdivision, and Siteplan Review. Zoning must be voted on by the town’s legislative body, the subdivision and site plan regulations may be amended by the Planning Board after a public hearing.

The following conceptual changes were discussed and will move forward with additional research;

Zoning
1) Change the definition of frontage to mean maintained roads.
2) Relaxing the lot coverage requirement, which currently stands at a maximum allowable coverage of 20%.
3) Establishing a setback from wetlands. The town has no setback now beyond state regulations.
4) Creating some standards for how the term “nuisance” will be interpreted in the ordinance.

Subdivision
Changing or eliminating the 4 to 1 ratio.
Creating incentives for use of the conservation design approach to subdivision.
Site Plan Review

Requiring all buildings in town over a certain size to go through site plan review.

Making sure that the definitions in all three regulations are the same and that citations are updated.

The Planning Board will work on each of these in more detail throughout the fall.

The meeting adjourned at 9:15pm.

MINUTES OF THE PLAINFIELD PLANNING BOARD
September 18th 2006
Meriden Town Hall

Members Present: Jane Stephenson Greg Estey
Greg Davini Des Hudson

The meeting opened at 7pm

KUA Athletic Fields: Chief Financial Officer Hugh McGraw met with the Planning Board to update the board on the status of the lighted field project. The turf field is now installed and being used for practices. The first game will be on the field in early October. The project is moving on with phase II at this time. The large retaining wall planned for near Route 120 has been eliminated and replaced with a sloped bank. This was accomplished by narrowing up the adjacent field. The power connection to the lighted fields will now come off Main Street and be entirely underground including the Main Street crossing.

The brick building planned for relocation was not able to be moved and in the end the building was demolished and at this time no bathhouse is planned for the field.

The old barn on the site, which KUA had said in May would be dismantled by students and faculty and reused elsewhere on the campus as wood working shop, was torn down. Kit Creeger saw the demolition in progress and was able to save some of the barn frame to use for his own project. Jane Stephenson expressed her displeasure with the way the barn issue was handled. She noted that the historical society had previously corresponded with Mike Schafer and the historical importance of some of the barns on the campus, and even provided KUA with names of people in NH who specialize in barn preservation projects. Had KUA made any effort to notify the KUA and Plainfield Community, including the Historical Society, or the barn experts, that they intended to demolish the barn, it’s likely that someone could have been found who would have dismantled the barn carefully and reused it.

Work is now in progress to make the needed improvements to the path from the hockey rink/Arts Center Parking lot down to the fields. Landscaping will be done in the spring as outlined on the approved plan.

Other Business: The mylar for the now approved Jordan subdivision was signed and will be forwarded to the Sullivan County Registry for recording. The August 21st minutes were approved as amended.

Zoning Changes: The board spent the rest of the meeting working conceptually on zoning changes. After a long discussion it was determined that priorities would be items such as lot coverage allowances, frontage requirements for subdivision, scale and scope of businesses that are allowed in the various zones. Judy Atwater and Holly Brashwell participated in this portion of the discussion. They noted that their main concern is that large scale “industrial” type business not be allowed in the town’s various village areas. They feel that the current ordinance does not prevent this from happening and it should be strengthened.

Draft language will be reviewed at the October 2nd meeting. Ms. Atwater will prepare a two page or less document outlining what she and others feel need to be considered for changes to the existing zoning ordinance as it pertains to Plainfield Village.

The meeting adjourned at 9:00pm.

Jane Stephenson, Chair
Plainfield Planning Board

A quorum of the board not being present, an official meeting could not move forward.

However, the board members present spent about an hour and half discussing the proposed zoning changes. This included a discussion with a group of Plainfield Village Residents about possible changes to the existing zoning ordinance to enhance protections for the core of the town’s historical village areas. In general, there is a sense from this group that the current ordinance has the potential to allow business uses in the village area that are larger than is appropriate for a village setting.

The gathering broke up about 8:50pm. The Planning Board’s next discussion on zoning changes will be October 16th at 7:00pm.

                Des Hudson Ron Liston
                Mike Sutherland Ruth Cassedy

The meeting opened at 7pm

Whitaker road scenic hearing: Jeff Carney, forester with National Grid, explained the proposed work on this scenic road. The proposal involves extending National Grid’s line one pole to reach a new residence being constructed at 144 Whitaker Road. Currently this stretch of Whitaker Road has cable and telephone, but no power service. New Hampshire Electric serves the west end, National Grid the east end of the roadway. Planning Board member Mike Sutherland and Town Administrator Stephen Halleran met on site with Jeff earlier in the day. Des Hudson and Ron Liston noted they had viewed the site as well. Abutter Judy Durant attend the hearing.

The current proposal is to remove some underbrush near existing poles and to trim several large and dying maples, but not to remove them at this time. The decision not to remove is due to the scenic road law and the landowner’s wishes to have the trees remain in place for as long as possible. The board voted to approve the work as amended at the hearing. A letter to National Grid will follow.

James Mulligan: Preliminary discussion concerning a three lot subdivision of his Porter Road Willow Brook Road property, tax map 216 lot 13. Mr. Mulligan showed the board a conventional three lot division of the property that he and his surveyor feel meets the town’s current regulations. The property has lots of road frontage but access is difficult due to Blood Brook. Given the nature of this property which, is a mixture of wetland areas, existing stonewalls and upland land Mr. Mulligan was encouraged to consider a Conservation Design project for the division to reduce the environmental impacts of the proposed two new houses on the property. Conservation Commission Chairman David Grobe, who was in attendance for the zoning amendment discussion, supported the idea of a Conservation Design project for this land.

Zoning Change Discussion: The remainder of the meeting was spent on discussing the Planning Board proposed changes to the zoning ordinance. In particular the wetland buffer proposal. Mike Sutherland used the town’s GIS data to demonstrate visually how the various proposals would affect land within the town. It was determined that the goal of the project is to amend the ordinance to make it clear that when, based on maps on file at the town office, a building project appears to be located close to a possible wetland the applicant will need to provide additional information to the town as part of the permitting process to show conformance with the setback or buffer area. The proposed language will be amended to include this information. Several of the Planning Board’s members will attend the state’s annual meeting for Conservation Commission’s. This year’s meeting includes several workshops on wetland buffering.

Member Des Hudson noted that he is working on a proposal for the VR zone that includes some of the concerns expressed by Plainfield Village residents at recent meetings. The
board will share this work with the residents at an upcoming meeting.

The meeting adjourned at 9:15pm.

MINUTES OF THE PLAINFIELD PLANNING BOARD

November 6th 2006

Meriden Town Hall

Members Present: Jane Stephenson Greg Estey
Des Hudson Ron Liston
Mike Sutherland Ruth Cassedy
Greg Davini

The meeting opened at 7pm

The October 16th minutes were approved as amended.

Zoning Changes: The Planning Board discussed whether or not the current zoning ordinance offers sufficient protection for the town’s village areas from large scale industrial type businesses that might attempt to locate in the heart of the village as real estate prices in Lebanon continue to escalate. Board members discussed options for framing various questions and proposed changes that might possibly address this concern. The adoption of a “Heritage Overlay Zone” for the town’s village centers is one possible approach. The Master Plan supports the notion of maintaining the rural character and existing architectural style of the historical urban environment. It was noted that the existing zoning ordinance already requires that all proposed uses be compatible with the surrounding neighborhood. A use that is permitted in a zone might not be appropriate in all areas of the zone. As part of its project review the Zoning Board, must take into account existing uses and development in the immediate area.

Deciding whether or not large scale residential buildings and related outbuildings should come under some town review was also discussed.

Board members expressed a desire not to see Plainfield become overly restrictive or regulated, but at the same time acknowledged that maintaining the existing rural character of our village centers is cited in both the master plan, zoning ordinance and various surveys as one of the main land use goals of the community. The current zoning ordinance relies heavily on the judgement of our land use boards on the appropriateness of the various proposals that come before them.

All agreed that getting the public to attend hearings on any proposed changes will be an important part of this process. Because Plainfield Village has been the center of much of the recent zoning issues in the community, holding the first or second zoning change hearing in the Plainfield Town Hall was suggested.

Member Des Hudson indicated he would take the various threads of tonight’s discussion and try to pull together a few possible changes to the ordinance that would address the concern of giving the Zoning Board more authority in dealing with large scale projects.

Attention focused on the possible adoption of a wetland buffer. Member Mike Sutherland explained that the proposal he is working on revamps the town’s existing wetland definition in such a way that the affected area in town is reduced, however, the protections afforded to areas determined to be wetlands is increased. Simply put, without a variance, development
would not be permitted within 50' of surface waters or a wetland area. It was noted that properly permitted wetland projects, crossings, dredging and filling would be allowed so long as they have received state wetland bureau permits.

While the proposal still needs fine tuning, board members felt this was an amendment that was needed and would be well supported from the community. The board will continue these discussions at the November 20th meeting.

The meeting adjourned at 10:00pm.

Jane Stephenson, Chair
Plainfield Planning Board

Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD  
November 20th 2006  
Meriden Town Hall

Members Present: Jane Stephenson Des Hudson  
Mike Sutherland Ruth Cassidy

Mark and Sandy Horne: Jane Stephenson opened the hearing by reading the posting. Surveyor Wayne McCutcheon explained that the Horne’s have filed an application for a three lot subdivision of property located at 1026 Route 12A. The project involves 7 acres of land currently inventoried as tax map 240 lot 5. If approved, this land will now be inventoried as three lots: Lot 1-3.59 acres containing the existing residence, lot 2-1.70 undeveloped acres and lot 3-1.85 undeveloped acres. The property is zoned Village Residential and is served by municipal water. Concerning the proposed septic systems state approval for subdivision has been received. The New Hampshire Department of Transportation has approved a single curb cut to provide access to both new lots. Lot 1 will be reached via a right of way over lot 2.

Planning Board member Mike Sutherland questioned whether this proposal will prevent the Horne’s from making the adjacent commercial building parcel conforming. The Horne’s indicated that they understand that this is the case, but at this time they have no plans for moving forward with an Approved Business Project at the commercial site.

Des Hudson encouraged the applicants to develop the lots with buildings that are in keeping with the existing architecture of the village. There being no abutters wishing to comment, a motion to find the application complete was made and approved. A motion to approve the subdivision followed and was approved on a unanimous vote.

William and Charlotte Quimby: Tony Quimby explained the application involves the annexation of 6.0 acres from tax map 245-18 owned by the Quimby’s to tax map 245-20 owned by Darrell and Amy Beaupre. If approved, the Quimby parcel will be reduced to approximately 36 acres and the Beaupre parcel will increase to 17 acres. There being no abutters wishing to comment, no new lots created and both lots satisfying the pertinent town land use regulations the project was found to be complete and approved as presented.

Mercier Subdivision, preliminary: Surveyor Chris Rollins presented the Planning Board with a preliminary plan for the creation of a 5 acre lot to be accessed from Jordan Road. The Mercier property consists of 40 acres. There was a detailed discussion about the access point, the four to one ratio and the status of several town roads in the area (Jordan, and Farm Road). A wetland crossing will be necessary to reach the house site. Chris will take the non-binding information back to the owners as he develops the final plan.

Zoning Changes: The Planning Board spent the rest of the meeting working on possible amendments to the town’s zoning ordinance. A public forum on some of the proposed changes is schedule for December 18th at the Plainfield Town Hall.

Board members reviewed and approved amendments to a proposal which if approved by voters will clarify the town’s definition of wetlands and create a wetland buffer.
The Planning Board will hold a public hearing on this issue on January 15th.

Concerning the heritage overlay district, board members felt that before coming forward with a specific proposal, hearing from a broader cross section of the town is necessary. To date, the board has heard a lot of concern from a small group of residents, however this change will require support from the entire community. The Planning Board will attempt to engage the public on this December 18th at the Plainfield Town Hall. Holly Braswell encouraged the board to try and make traffic calming in the village a part of this broader discussion. Board members agreed, noting that they felt there was a high level of support for this effort among the entire community. Developing specific traffic calming proposals for funding at March Town Meeting remains a possibility.

The meeting adjourned at 9:45pm.

Stephen Halleran
MINUTES OF THE PLAINFIELD PLANNING BOARD
December 4th 2006
Meriden Town Hall

Members Present: Jane Stephenson Des Hudson
Mike Sutherland Ron Liston
Greg Estey Greg Davini

The meeting opened at 7:00pm

The November 6
th and the November 20 th meeting minutes were approved as amended.

Zoning Changes: In follow up to the board’s November 20 th meeting, the Planning Board determined that the December 18 th public hearing will be focused on the concept of a Heritage Overlay District for the town’s Village area. While not a hearing on a specific proposal, board members felt the hearing would be more useful if focused on a specific idea. Halleran was instructed to publicize the meeting as soon as possible in hopes of getting good attendance at the hearing from all across the community.

The board continued its work on the zoning amendment proposal to create a 50' vegetative buffer for designated wetland areas. If approved, the proposal would prevent development within 50' of designated wetland areas without first obtaining a special exception from the Zoning Board. As a private resident, David Grobe participated in the discussions noting several areas where he felt the proposal needing additional clarification. The Conservation Commission plans to develop a recommendation on the proposal at its December 14 th meeting. The Planning Board will hold a public hearing the proposal in mid January. See attached draft.

Halleran distributed copies of an excerpt from Attorney Peter Loughlin concerning whether or not communities should allow subdivision of land fronting on class VI highways. The Planning Board has, in the past, discussed amending the definition of frontage in the town’s zoning ordinance to include the length along a maintained public highway. Currently, class VI road frontage is allowed for subdivision purposes even though building permits are not issued for lots on class VI highways.

The meeting adjourned at 9:20pm. The Board’s next meeting will be December 18 th at the Plainfield Town Hall.

Jane Stephenson, Chair
Plainfield Planning Board

Submitted,

Stephen Halleran
Members Present: Jane Stephenson Des Hudson
Ruth Cassedy Ron Liston
Greg Estey Greg Davini

The meeting opened at 7:00pm

Public forum on the Heritage District concept: Jane Stephenson opened the discussion by noting that over the last two years there has been a lot of talk about whether or not there is a need for an additional layer of zoning protection for the town's village areas. The current discussion is focused on Plainfield Village. There is no specific proposal before the town at this time, however, one idea that the Planning Board is investigating is the development of a Heritage zone within the Village zone which would likely have tighter restrictions for large scale business. As a first step in this process, the Planning Board is hoping to hear from residents on this issue. Jane noted that the Selectboard has forwarded a letter to the Planning Board indicating that they do not favor the heritage district concept at this time. The Selectboard feels the current ordinance is doing the job that it was designed to do.

On a related matter, Jane Stephenson noted that as previously discussed the Planning Board has established the date of January 15th for a meeting with NHDOT officials for a public discussion on traffic calming in Plainfield Village. All are encouraged to attend this meeting which will be held at the Plainfield Town Hall starting at 6:30pm.

Turning to those in attendance, the following excerpts are from the conversation that followed and are intended to provide a sense of the meeting, they do not include every comment that was made:

George Koehler noted that he does not think any new regulations are warranted, there is not in his view significant open land left in the village areas for new development.

Des Hudson noted that all Plainfield land not encumbered with easements is available for new development whether there are existing buildings on the lot or not.

Jim Longacre noted that there is less business in the village than twenty or thirty years ago and he feels the current zoning ordinance is sufficient.

Bev Widger indicated that she felt some changes are needed in the ordinance to tighten and strengthen it in the village district.

Brad Atwater noted that the current zoning ordinance with the approved business project concept has worked well for his building, however, both as a resident and now as a zoning board member he sees areas in the ordinance that could be improved upon. In particular he feels that rather than focus on what types of business should be allowed or not allowed the ordinance should clearly state limits that all uses must adhere to so that impacts to neighboring
property owners are minimized. Brad also noted that the board might want to consider a
regulation that requires buildings to be built in a scale and scope that is in keeping with the
neighborhood that they are being located in.

Stephen Halleran—current Zoning Administrator, noted that at this time the town has no
required regulations that govern residential or accessory type buildings, only commercial uses
are regulated beyond life safety issues.

Des Hudson pointed out that the town does have voluntary design guidelines that the Planning
Board encourages all applicants to follow. Copies of these regulations were handed around the
room.

Sandy Horne suggested that more definitions should be added to make it clear what is intended
by terms that exist in the ordinance.

Many in the room encouraged the Planning Board to help with the traffic calming issue that will
be discussed in more detail later in the month.

Areas of the zoning ordinance to consider relaxing existing regulations that were discussed
including the 20% maximum lot coverage and the accessory apartment needing additional land
over what is required for a single residential use. In both cases it was noted that advances in
technology for septic systems and storm water handling may have made this rules obsolete.
Likewise, if our current parking regulations are seen as an impediment to new businesses using
existing buildings they too should be reviewed.

Joe Longacre noted that he was the first zoning administrator for Plainfield back in the late 70's
and that the current ordinance was developed based on existing land use patterns and the carry
capacity of the vacant land as determined by soil types. Many of these limitations still exist
today and should not be forgotten.

Gordon Wilder asked that the Planning Board not bring forward a Heritage District proposal
at this time. Likewise, Mr. Wilder does not support the proposed 50' setback from wetlands that
will be discussed later next month.

Jane Stephenson thanked all those in attendance for coming and noted that these types of
discussion are very helpful to the Planning Board.

Jane Stephenson, Chair
Plainfield Planning Board
